

## Habitat Management (CSP Enhancements)

October 2005

### Colorado Enhancement Activity Job Sheet H-1

Name: \_\_\_\_\_

#### Retain Tall Stubble Through Winter Using a Stripper Header

Payment = \$3.00 / Acre / Year for each acre where a stripper header is used to harvest grain. Post-harvest grain stubble will be 15" or taller. Stubble will not be tilled until after July 1<sup>st</sup>, but during this time weeds will be adequately controlled through spraying or biological agents. If a spring crop is planned, it must be no-tilled into the existing cover.

This enhancement provides food, escape cover, day and night roost sites, and nesting sites for a number of wildlife species ([list local species that will benefit](#)).

**Documentation Required:** Use the following Table for documentation. Attach a plan map showing the field numbers where the stripper header will be used.

Tract & Field Numbers	Target Species	Type of Grain	Stubble Height After Harvest	Date of First Tillage

I hereby certify that I used a stripper header on the fields identified above.
